**“So, Russian air strikes could target, for example, missile defense objects in Poland, an airfield in Bulgaria, or any other military facilities in Europe.” Photo: Nuclear-capable Kalibr cruise missiles**

From Euromaidan Press, July 16, 2017 [⋯] On July 7 at a joint meeting of the Military Council of the Armed Forces of Ukraine and the National Academy of Sciences, the Chief-of-Staff of the Armed Forces of Ukraine Viktor Muzhenko declared that Russian troops were getting ready to place nuclear weapons in occupied Crimea. “They’ve started working on restoring storage facilities for nuclear weapons – the Feodosiya-13 site – and a strategic aviation base at Gvardeyskoye airfield. At least one frigate and three submarines of the Black Sea Fleet are equipped with modern rocket systems (Kalibr-type cruise missiles) that can be armed with nuclear weapons,” Muzhenko said.
